CONCEALED FLANGE FACE MOUNT BEAM HANGERS

Concealed flange face mount beam hangers are used to support beams or joists in wood framing applications where a cleaner finished appearance is preferred. The concealed flange design hides the side flanges behind the supported member, leaving only the front plate visible once installed.

Manufactured from galvanized steel, these hangers are designed for durability in general construction environments. The face-mount configuration allows straightforward alignment and installation using commonly available fasteners and tools.

SPECIFICATIONS

APPLICATIONS	• Supporting beams or joists in wood framing • Beam-to-beam connections • Beam-to-post framing connections • Framing installations where concealed side flanges are preferred • Residential or light commercial construction projects
MATERIAL	Galvanized Steel
FEATURES	• Concealed flange design hides side flanges after installation • Face-mount configuration supports straightforward installation and alignment • Designed for nominal beam sizes listed above • Galvanized steel construction for durability • Compatible with common framing fasteners
INSTALLATION NOTES	Proponents hardware is engineered for dimensional compatibility with industry standard connector profiles. Products are manufactured to published industry specifications. Fastener type, quantity, and installation requirements should be verified by the installer or design professional based on project requirements and applicable building codes.
WARRANTY	Limited 1-Year
