ITEM #IF1373

PASSAGE DOOR LEVER

MORE STYLES AVAILABLE

This passage door lever is used on interior doors where no locking function is required, including hallways, closets, and common areas in residential and multifamily projects. It is designed to fit standard door preparations used in new construction and renovation work.

Builders choose this lever for predictable installation and consistent performance across unit counts. The adjustable 60/70 mm backset accommodates common door layouts, and the included hardware supports faster installs with fewer missing components.

The lever is constructed from stainless steel 201 with a matte black finish and installs using standard door prep.
