ITEM #IF1375

ELECTRONIC TOUCH PAD DEADBOLT

MORE STYLES AVAILABLE

This electronic touch pad deadbolt is used on entry doors in multifamily and build-to-rent applications. It provides keyless access while retaining a mechanical key override for backup entry and service access.

Builders and property managers choose this lock to simplify unit turnover and maintain consistent installation across units. The adjustable latch fits standard door preparations, allowing it to be specified broadly without door modifications. Re-keying capability supports long-term use without full hardware replacement.

The deadbolt features a matte black finish, adjustable latch, and standard door prep compatibility. It is ANSI Grade 2 certified and UL fire rated.
