ITEM #IF1478

ADJUSTABLE STRAIGHT SHOWER ROD

This adjustable straight shower rod is used in residential, multifamily, and hospitality bathroom installations. The telescoping design allows it to fit standard shower openings without cutting or modification.

Builders choose this rod for corrosion resistance in wet environments and reduced installation time across multiple units. The individual packaging simplifies jobsite distribution and stocking.

The rod adjusts from 48 in. to 60 in. and is constructed from 1" (25 mm) diameter 304 stainless steel tube with 0.6 mm wall thickness. Zinc alloy wall brackets and a matte black finish are included.
