ITEM #IF1690

CORDLESS FAUX WOOD BLINDS

These cordless faux wood blinds are used for window coverings in residential and light commercial applications. They are suitable for standard window openings in new construction and remodels.

Builders choose these blinds for durable materials, simplified operation, and compliance with child and pet safety requirements. Cordless operation reduces moving parts and installation complexity across units.

The blinds measure 34 in. wide × 60 in. long and feature non-leaded rigid PVC slats, a steel headrail, and a matching valance.
