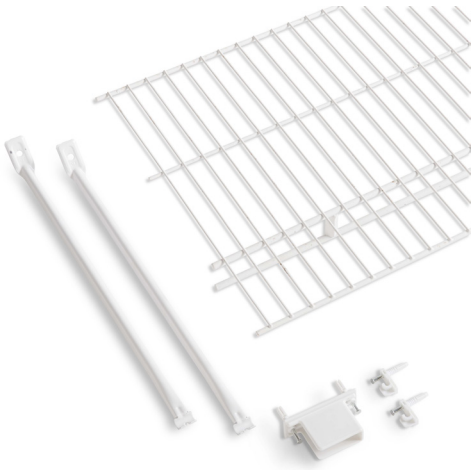
ITEM #IF1701

16" DEEP WIRE SHELF SYSTEM



This wire closet shelf system provides a complete horizontal storage and hanging solution for residential and multifamily closets. It is specified and installed as a coordinated system rather than individual components, supporting consistent layouts across units.

The shelf and support components are pre-matched to deliver proper load support and alignment, allowing crews to install quickly using standard methods. Shelves can be cut to length on site to accommodate different closet widths without special fabrication.

The system includes a 12 ft. long, 16 in. deep wire shelf with integrated rail, 12 in. shelf support braces for vertical reinforcement, preloaded wall end brackets to secure each shelf end, and preloaded back clips to fasten the shelf to the rear wall. All components are finished in white and designed to work together as part of the Proponents Wire Shelf System.

SPECIFICATIONS

PACKAGE CONTAINS	Wire closet shelf with integrated rail 12" shelf support braces Preloaded wall end brackets Preloaded back clips
