ITEM #M1713

# INSULATED DUAL COPPER TUBING LINE SET

This 50 ft pre-insulated dual copper tubing line set is designed for reliable connection between indoor evaporators and outdoor condensers in mini-split and split central air conditioning systems. Featuring ¾ in. suction and ⅜ in. liquid lines, it supports common refrigerants such as R-410A and meets the needs of residential and light commercial HVAC installations.

The twin copper tubes are factory-insulated with durable white PE foam to improve energy efficiency and control condensation. Supplied in a flexible coil, the line set simplifies routing through tight spaces, reduces on-site measurement errors, and helps streamline ordering and installation logistics. Built with consistent copper wall thickness for dependable brazing and long-term performance.

## SPECIFICATIONS

| | |
|---|---|
| **PACKAGE CONTAINS** | Insulated Dual Copper Tubing Line Set |
| **MATERIAL** | PE, Copper |
| **STOCK COLOR** | White |
| **FEATURES** | • Pre-insulated for improved energy efficiency and moisture control<br>• Flexible coiled tubing for easier routing in confined spaces<br>• Standard factory length reduces field measurement errors<br>• Reliable copper wall thickness suitable for brazing<br>• Simplifies installation and improves job-site efficiency |
| **DIMENSION** | 0.375" Liquid × 0.75" Suction × 49.2 ft Length |
| **WARRANTY** | Limited, 2-Year |

2 YEAR WARRANTY
